PROFESSIONAL SUMMARY

Data Analyst with an MSc in Data Science (University of Birmingham) and two years at CGI delivering software and dashboards for a German banking client. Uses SQL and Python to query, clean and analyse data, run statistical tests and build predictive models, with Excel for analysis and Tableau for dashboards and reporting.

TECHNICAL SKILLS

Analysis: SQL, Python (pandas, NumPy, scikit-learn), Excel (pivot tables), EDA, Data Cleaning, Feature Engineering, Statistical Analysis, Hypothesis Testing

BI & Reporting: Tableau, Power BI, Looker, Streamlit, Dashboard Development, KPI Reporting, Data Storytelling

Modelling: Regression, Predictive Modelling, XGBoost, LightGBM, SHAP, Cross-Validation, Trend Forecasting

AI Tools: Claude Code and ChatGPT for building apps and analysis workflows, Prompt Engineering

PROJECTS

Football Player Valuation and Bias Analysis – Python, pandas, scikit-learn, XGBoost, LightGBM, SHAP, Streamlit 2026

- Built position-specific valuation models for 2,061 players across Europe's Big 5 leagues (2024–25), reaching R^2 of 0.69–0.78 after comparing four algorithms per position with 5-fold cross-validation.
- Shipped a live 5-page Streamlit dashboard that flags 207 undervalued players (10% of the sample) for scouting.
- Matched FBref statistics to Transfermarkt values at a 95.5% match rate, then used SHAP to measure league bias: the Premier League was the largest league effect in all four position groups.

UAE Flight Movements and the DXB-to-DWC Move – Python 2025

- Analysed UAE flight movements (2018–2025) and Dubai Airports capacity data to test whether demand supports the DXB-to-DWC expansion; measured a 52.8% COVID drop in 2020.
- Built a COVID-excluded trend model (R^2 0.82) projecting about 979K flights by 2032, about 17% above the 2025 record of 833,789. DXB already handles 95.2M passengers (about 83% of capacity) against about 1.1M at DWC.

Formula 1 Race Analysis – SQL, Python 2025

- Tested the claim that modern rules made overtaking easier across 26,759 results: grid-to-finish correlation rose from 0.64 to 0.76 after 2010, so starting position matters more, not less. DNF rate fell from 58.5% (1980s) to 12.7% (2020s).
- Wrote 12 SQL queries (CTEs, window functions, self-joins) on a 12-table SQLite database covering 75 seasons (1950–2024), including a hand-built Pearson correlation because SQLite has no CORR().

Spotify Personal Listening Analysis – Python 2026

- Analysed 7.5 years of streaming history (140,161 plays, 2,577 artists): EDM fell from 56% of listening hours in 2020 to 26% in 2025, and the top 100 artists account for 68% of hours against 26% for the top 100 tracks.

EXPERIENCE

Associate Software Engineer, CGI Inc.

Aug 2023 – Aug 2025

Large German banking client

- Built the dashboard layer of an internal ESG reporting proof of concept, turning data extracted from company annual reports into Looker dashboards (initial versions in Tableau) to support the client pitch.
- Mapped entity relationships across data repositories and built the front end of an AI-based database administration tool.
- Delivered and maintained Angular front-end features for the bank's applications, integrating them with back-end services.

EDUCATION

MSc Data Science, University of Birmingham, Dubai

Oct 2025 – Sep 2026

BSc Computer Science, Mathematics and Statistics, Christ University, Bangalore

2020 – 2023

CERTIFICATIONS

Google Data Analytics Professional Certificate, Coursera (Jun 2023)

McKinsey Forward Program, McKinsey.org (Jul 2025)

Principles of Management, IIT Roorkee (Mar 2023)

Programming Fundamentals, Duke University (Sep 2021)
