PROFILE

Analytically-minded professional with 2 years of enterprise software delivery experience and an MSc in Data Science in progress. Comfortable turning raw data into clear findings using SQL, Python, and Tableau — demonstrated through a portfolio of self-directed projects spanning sports, aviation, and financial analytics. Looking to bring a structured, insight-first approach to a Data, Business, or Financial Analyst role.

PROFESSIONAL EXPERIENCE

Associate Software Engineer — CGI Inc. *Aug 2023 – Aug 2025*

- Delivered front-end features for a major European banking client as part of CGI's enterprise engineering team, working within the structured change-control and quality standards typical of regulated financial environments.
- Built interface components for an AI-based database administration tool that mapped and visualised entity relationships across repositories, giving direct, hands-on exposure to how technical teams design tools for data exploration and navigation.
- Sustained two years of reliable delivery in a large, process-driven enterprise team — a foundation in the discipline and structure that regulated-industry analyst roles also require.

Data Analyst Trainee — MedTourEasy *Jul 2023 – Aug 2023*

- Completed a structured data analytics training programme covering spreadsheet analysis, data visualisation, and data storytelling using real-world business datasets.

ANALYTICS PROJECTS (FULL WRITE-UPS + LIVE LINKS AT [AJA642.GITHUB.IO](https://github.com/AJA642))

Bias Detection in Football Player Valuations — MSc Dissertation *2026*

- Built a 5-page interactive dashboard analysing market valuations of 2,061 professional footballers to test whether league prestige, not just performance, drives a player's valuation.

- Applied explainable-AI techniques (SHAP) to isolate the effect; found Premier League affiliation was the single largest contributor to valuation bias across every playing position.

US Flight Delay Analysis — SQL Case Study 2026

- Analysed 1.4M US domestic flight records with SQL to identify what actually drives delay, finding a late aircraft's next flight ran over 13x more delayed on average than a fresh first flight of the day.
- Traced 67% of cancellations to weather, and delivered airport/route-level operational recommendations directly from the findings.

Stock Portfolio Analyzer & Backtesting Engine 2026

- Built and backtested 4 investment strategies across a 15-asset, 10-year dataset, comparing risk-adjusted performance via Sharpe ratio, drawdown, and Monte Carlo simulation.
- Found the equal-weight portfolio delivered the strongest risk-adjusted return of the four, despite a tech-heavy allocation posting higher raw returns — a diversification finding validated through stress-testing.

SKILLS

Data Analysis & Querying: SQL, Python (pandas), Excel

Data Visualisation & BI: Tableau, Streamlit, Power BI (in progress)

Other: Git, statistical fundamentals (BSc Mathematics & Statistics)

EDUCATION

MSc Data Science — University of Birmingham Dubai *Oct 2025 – Present*

BSc Computer Science, Mathematics & Statistics — Christ University, Bangalore *2020 – 2023*

CERTIFICATES

Google Data Analytics Professional Certificate (Coursera) · Principles of Management (IIT Roorkee) · Programming Fundamentals (Duke University)
